

Commitment to Integration & Development Opportunities

DeliveryTrack operates on an open platform allowing full integration to other industry software and third-party technologies. This flexibility allows DeliveryTrack to fit seamlessly into your current processes and adapt to future technological growth. Currently offering an extensive bank of interfaces, Integra is continually working with industry partners on additional integration.

Robust Integration With:

- **DocuTrack:** Final delivery manifests are instantly imported into DocuTrack and associated to the original order. Staff can then easily retrieve manifests for audits and customer inquiries.
- **All Major Pharmacy Systems:** Integra provides 20+ Pharmacy Information System interfaces using a Direct Connect interface for robust information exchange. We also offer screen scrape interfaces, and can develop interfaces for specific customer needs.
- **UPS System:** Track items through the UPS delivery process with the completed UPS manifest, including delivery signature, returned to DeliveryTrack upon delivery.
- **Major Packing Solutions:** Receive the benefits of automated dispensing with technologies like DOSIS, Medicine-On-Time, TCGRx, and SynMed.

Development / Integration Tools

The DeliveryTrack API (Application Programming Interface) makes it possible to import delivery items from other software systems across the internet. The API can be used to create, update, and track order status in real-time.

The API is made available as a set of SOAP based XML Web Services built on open standards. The API is supplemented with extensive documentation that includes examples, descriptions, and explanations, to help software developers integrate their solution quickly and easily. Our API program is designed for flexibility and speed of development.

For more information on integration opportunities, please email info@integragroup.com.
