

# DocuTrack eRx Module

## TAKE CONTROL OF ELECTRONIC PRESCRIPTIONS

The **eRx Module**, gives pharmacies control over how they receive and process electronic prescriptions, allowing incoming NCPDP 10.6 messages to be processed through DocuTrack import rules and pharmacy workflow. Adhering to its commitment to open-systems, Integra is eager to work with all Pharmacy Information Systems, and currently has tight integration with QS1 PrimeCare® and a number of leading EHR vendors. The module is included free of charge to DocuTrack customers.

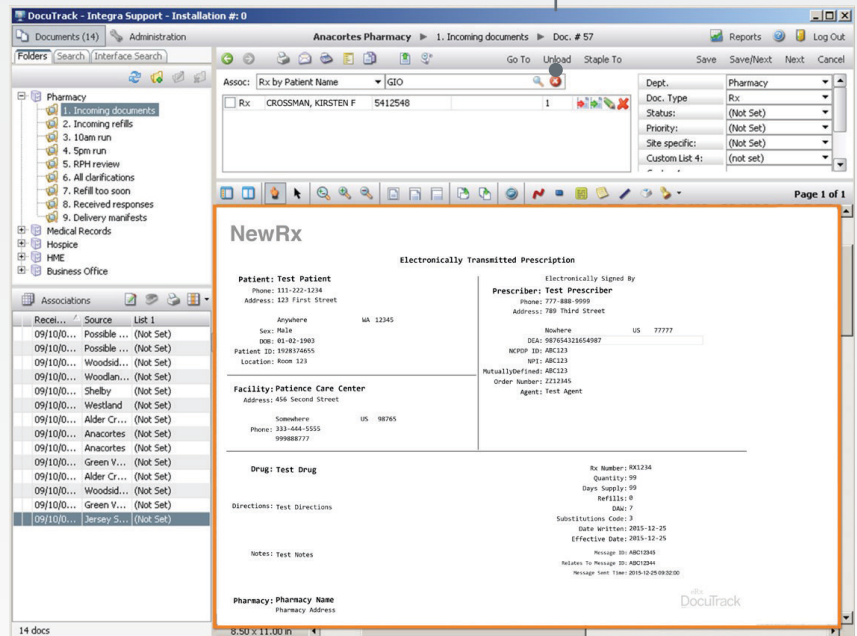

### THE ERX MODULE ALLOWS PHARMACIES TO:

- Receive copies of NCPDP 10.6 transactions
- Centralize handling of messages regardless of source
- Handle multiple message types including:
  - New Rx
  - Cancel Rx
  - Resupply
  - Refill Response
  - Census

Templates are populated with content provided by incoming messages. DocuTrack associations are automatically created by the eRx Module based on Rx, patient name, facility, etc. This saves time and simplifies look-up in DocuTrack.

### BENEFITS

- Free to DocuTrack customers
- No transaction fees\*
- Fully NCPDP 10.6 and EPCS Compliant
  - Preserves XML in compliance with 10.6 regulations
  - Auditing accomplished similar to faxed orders
- Highly flexible and configurable
  - Receive documents from fax and electronic sources into a single workflow
  - Use document import rules to customize routing
  - Alerts monitor incoming eRx messages
- Customizable message templates
- Access to complete history for simplified audits
- Rx information displayed in an intuitive standard script format
